

GPS1

GPS ANTENNA

Thank you for choosing a PZR product. The GPS1 GPS antenna is designed to receive GPS data such as:

- GPS SPEED
- COMPASS
- ALTIMETER
- DISTANCE TRAVELED
- ENGINE HOUR METER
- GPS COORDINATES

Connect the 4-pin connector of the GPS antenna to the X100 module.

Position the antenna above or below the dashboard, as deep as possible under the windshield, to minimize the amount of overhead coverage caused by the vehicle's roof. Make sure it is not covered by ferrous materials such as pillars or pipes, which could significantly limit reception.
